

MODULE 4:

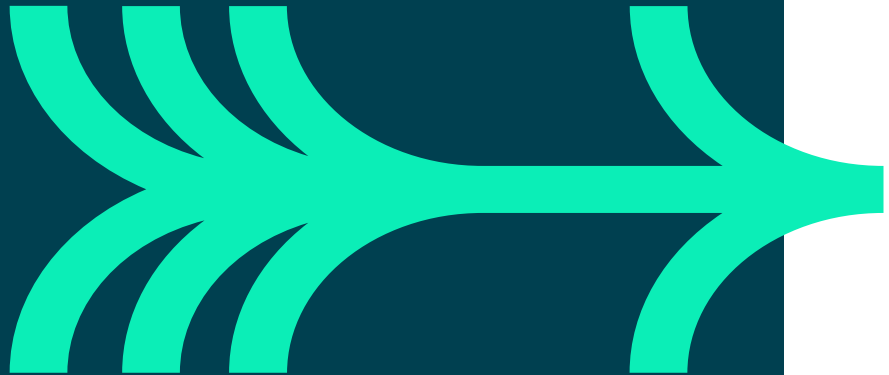

PYTHON

FUNDAMENTALS

REVIEW

In this module we will cover:

- Data Types
- Comparisons, Logical Operators and Booleans
- Containers
- Conditional statements
- Iterating - For Loops
- Iterating - While Loops
- Functions

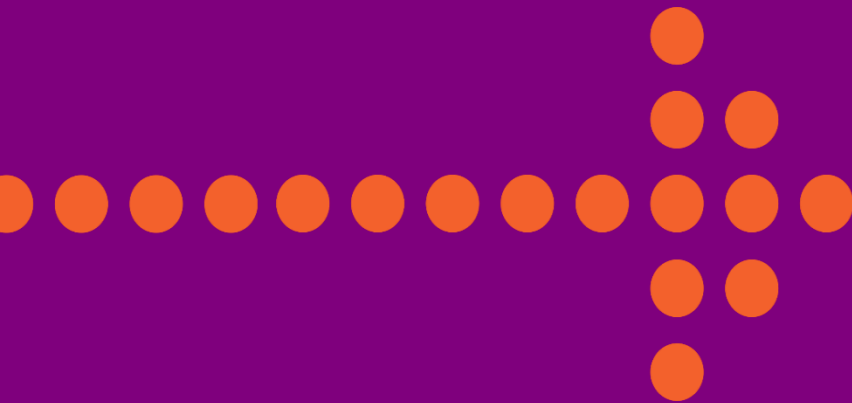

Group Discussion

Examples of data types do we have in Python?

Examples of containers do we have in Python?

Examples of conditional statements in Python?

Python Review

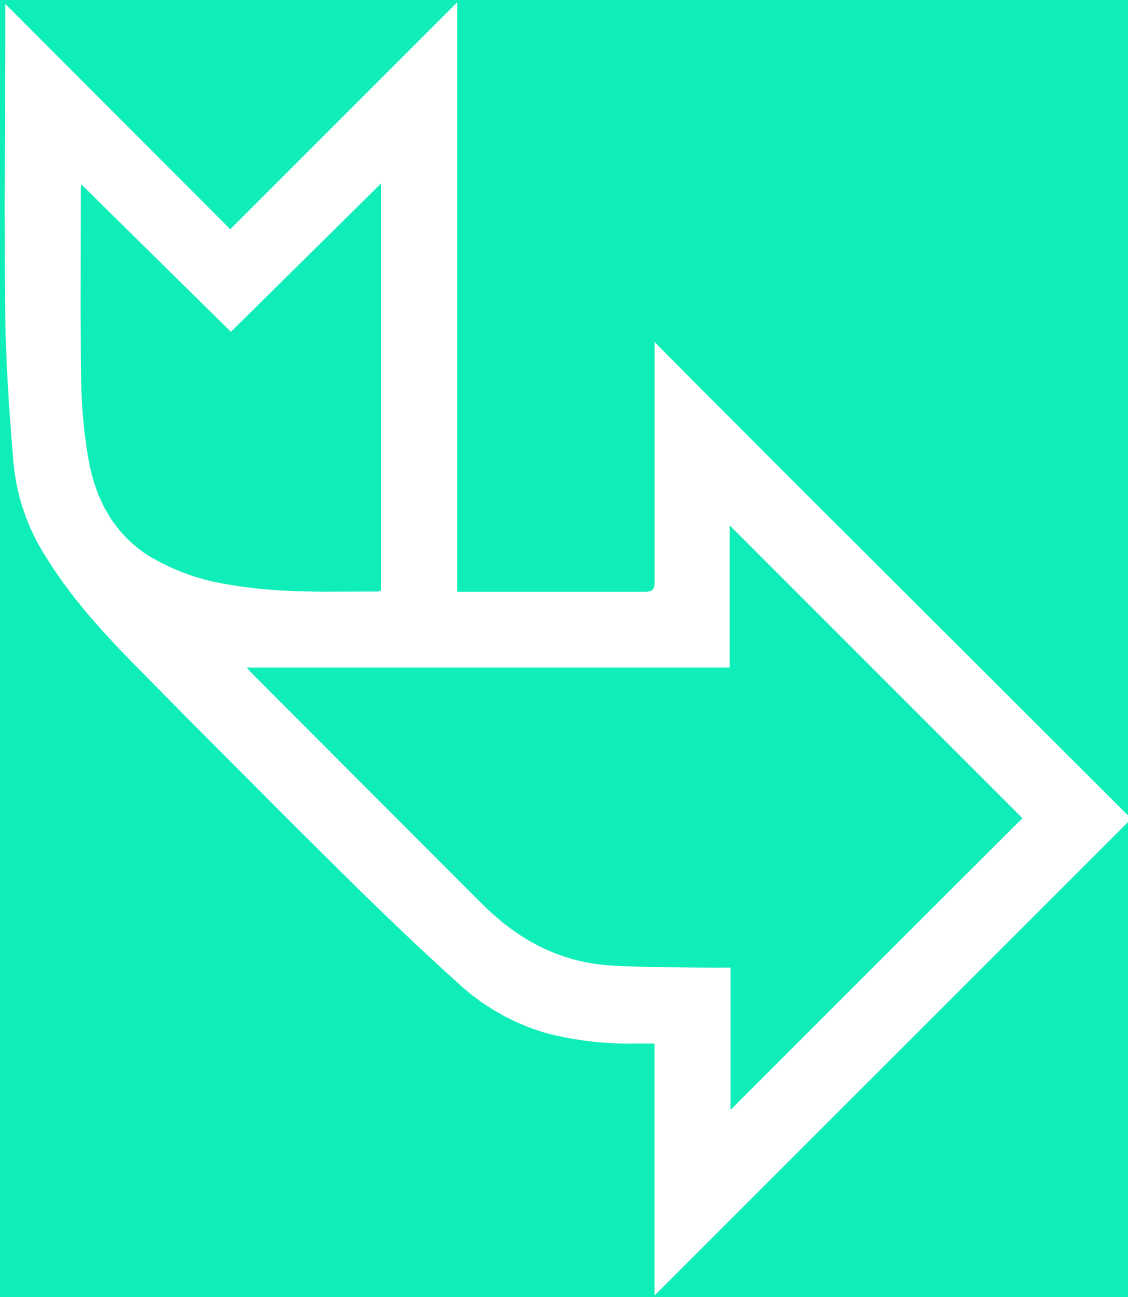

Demo and Exercises

Open file:

[Review Python Basics notebook](#)

A recap of all mentioned in the previous slide with exercises

Some extra exercises with solutions are included in another notebook as well

END OF MODULE

- List the data types available in Python?
- List the data structures available in Python?
